

Compar Pro

The purpose-built video comparison and analysis application.

Precision & Accuracy

Faster than real-time analysis

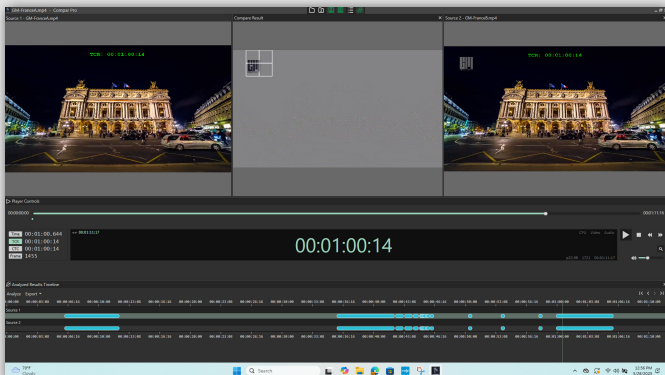

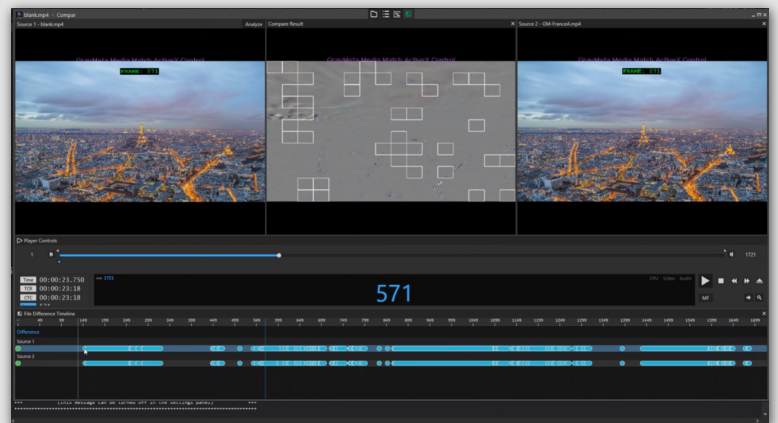

Compar Pro enables the analysis and comparison of two video files to show you what is different between them; providing insight to manage your media library efficiently. QC, technical inspections or content reviews are all workflows in which Compar Pro can be utilized.

Multiple Use Cases

Technical Differences

Evaluate color and compression

Immediately determine any technical differences in compression, noise, or resolution beyond a customizable threshold.

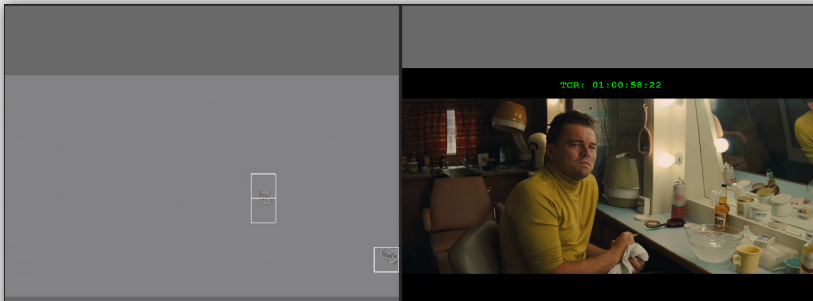

Discover Visual Differences

Frame-accurate detections

Detect the presence of Subtitles, Narrative titles, Overlays, Watermarks, Bugs, Shot replacements, Missing scenes or shots. Visual changes or alterations like blurs, overlays, distortions, wipes.

Basic file attributes like duration, name, or size don't reveal the full story.
Why do multiple versions of the same content exist?
What's changed? What's missing?

With the dramatic increase in content versioning across platforms, regions, and audiences, media teams face a growing challenge: knowing whether assets are truly different or just variants. Compar Pro by GrayMeta brings clarity to that complexity. With frame-accurate, pixel-level analysis, Compar Pro empowers your team to validate every version with speed and precision—ensuring flawless delivery across all channels.

Faster than real-time analysis enables the detections of small logo blurs that may be used, but would easily be missed in simple side-by-side viewing.

Pixel-level comparison enables the precise frame where a difference is detected, and notes the entire duration, all exportable in a time-based report.

Detect exactly where AI generated frames were added to a scene

If you're a video user of any kind, it's more likely than ever that you will need to know exactly what is different (or the same) in two or more files.

Compar Pro

- ✓ Detect subtle editorial changes
- ✓ Confirm color conformity across formats
- ✓ Accelerate QC workflows
